

Workshop with customers Energy Track & Trace

European cooperation on real-time tracking
of sustainable energy.

November 17th 2021

Agenda Workshop #1

1. Setting the scene
2. Snapshot of 2025: 2 user journeys
3. Comments & voting
4. Next step

Our goal of today:

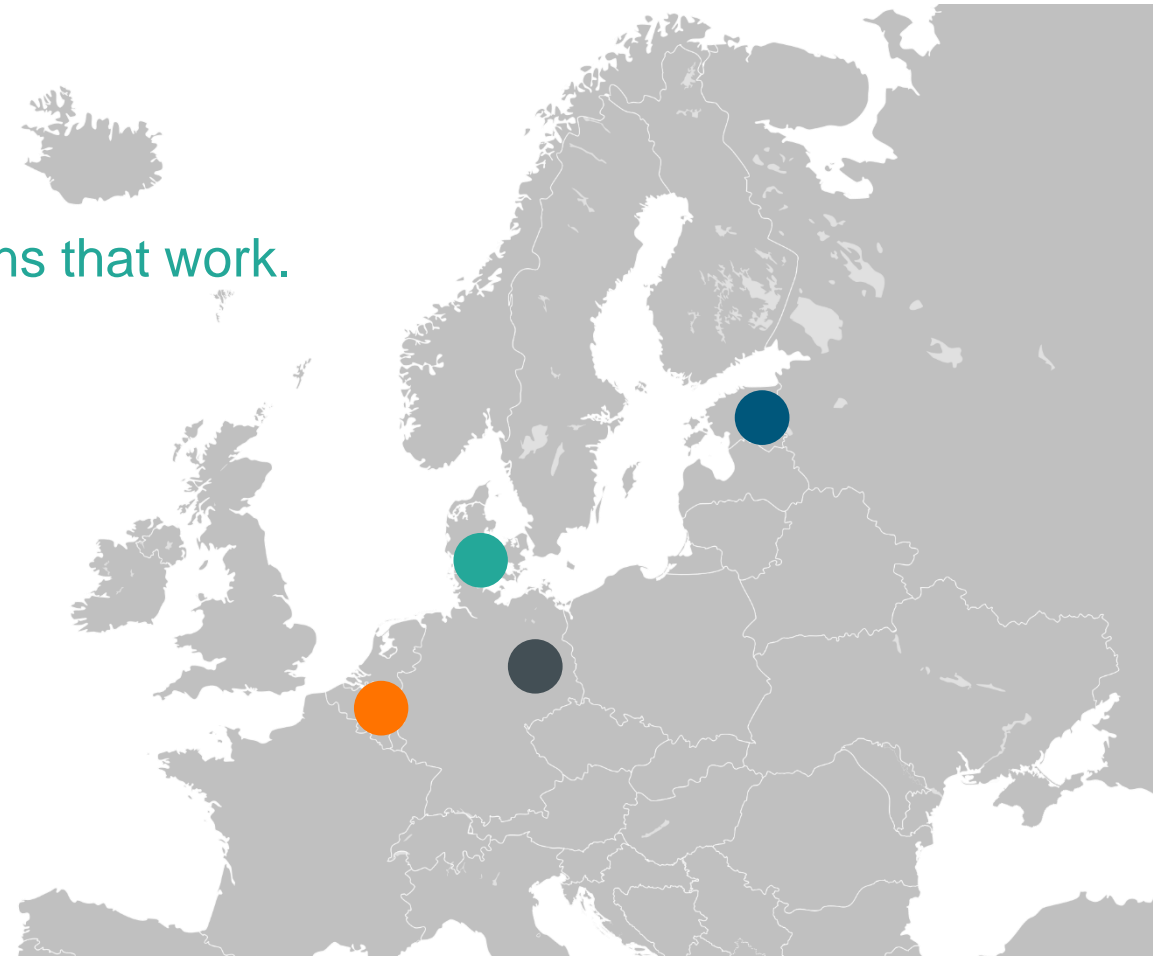

- Get you up to speed
- Get input to 2 user journeys

Why join this initiative?

Together, we set new standards by creating solutions that work.

- 1) Co-Create and influence the Granular Certificate development of the future
- 2) Voice what brings value to you and is relevant for you and your industry
- 3) Use your First-mover position to accelerating RE and thereby ensure more sustainable and cost-effective energy
- 4) Concrete demonstrator project, build on data and digitalization

3 TSOs drive Energy Track and Trace initiative:

elering

ENERGINET

East Germany and Belgium

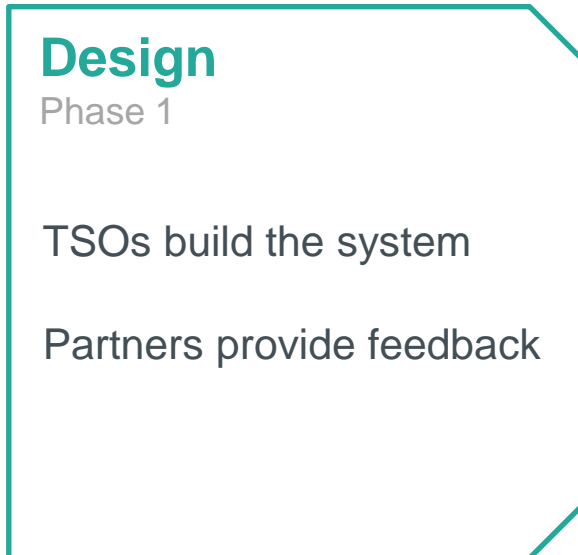

Estonia

Denmark

“ Energy Track and Trace is your
real-time digital proof that
sustainable energy choice actually
makes a difference”

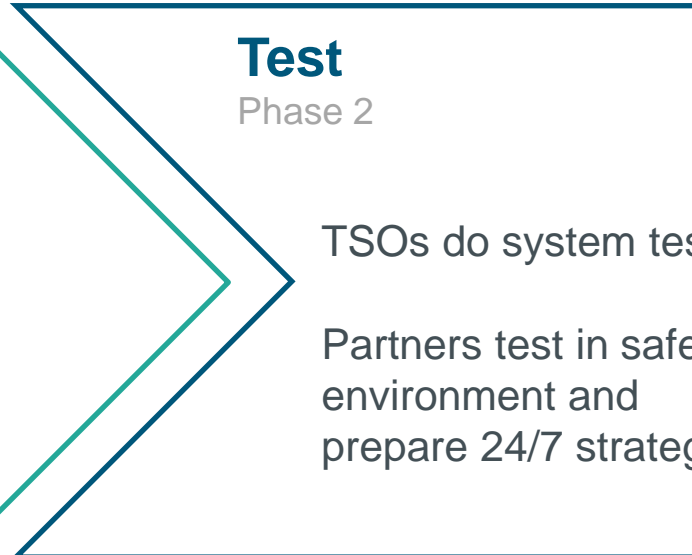

Timeline

Sep 2021 – March 2022

The TSOs need feedback to make sure it is moving into the right direction. Feedback during three workshops.

April 2022 – December 2022

No cost, based on actual data. Preparations for go-to-market. Developing communication and branding.

2023

Go-to-market, launch as voluntary system that will be potentially regulated. Pave the path as we go.

Commitments from partners

Sep 2021 – March 2022

Design

Step 1

Partners commit to:

Providing feedback

One workshop every 2 months workshops on concrete challenges.

make sure it is moving into the right direction. Feedback during three workshops.

June 2022 – December 2022

Test

Step 2

Partners commit to:

Share data

Invest time for testing
Develop a 24/7 strategy (including communication strategy)

System on actual data. Risk-free testing in a safe environment. Partners develop strategies.

2023

Launch

Step 3

Partners commit to:

Buying and selling GC

as much or as little as fits your strategy

Go-to-market voluntary system that will be potentially regulated. Pave the path as we go.

3 TSOs – 3 Journeys – 1 shared vision

Current setup

- Team focused on technical deliveries
- Team focused on market/user journey
- Legal adviser / regulatory affairs

What we bring

- Technical functional prototype ready by Christmas
- Ready to onboard data

What we seek

- Customers who will engage with data
- International voice

Current setup

- Team focused on concepts
- DataHubs and registries for renewable electricity and gas

What we bring

- Electricity and gas expertise – TSO, data hub and registry operator, GO issuing body

What we seek

- Expanding the usage of GOs
- International voice

Current setup

- Full scale IT-system (EnergiOprindelse) in DataHub build Open-source
- 5 streams engaged, incl. Legal advisers

What we bring

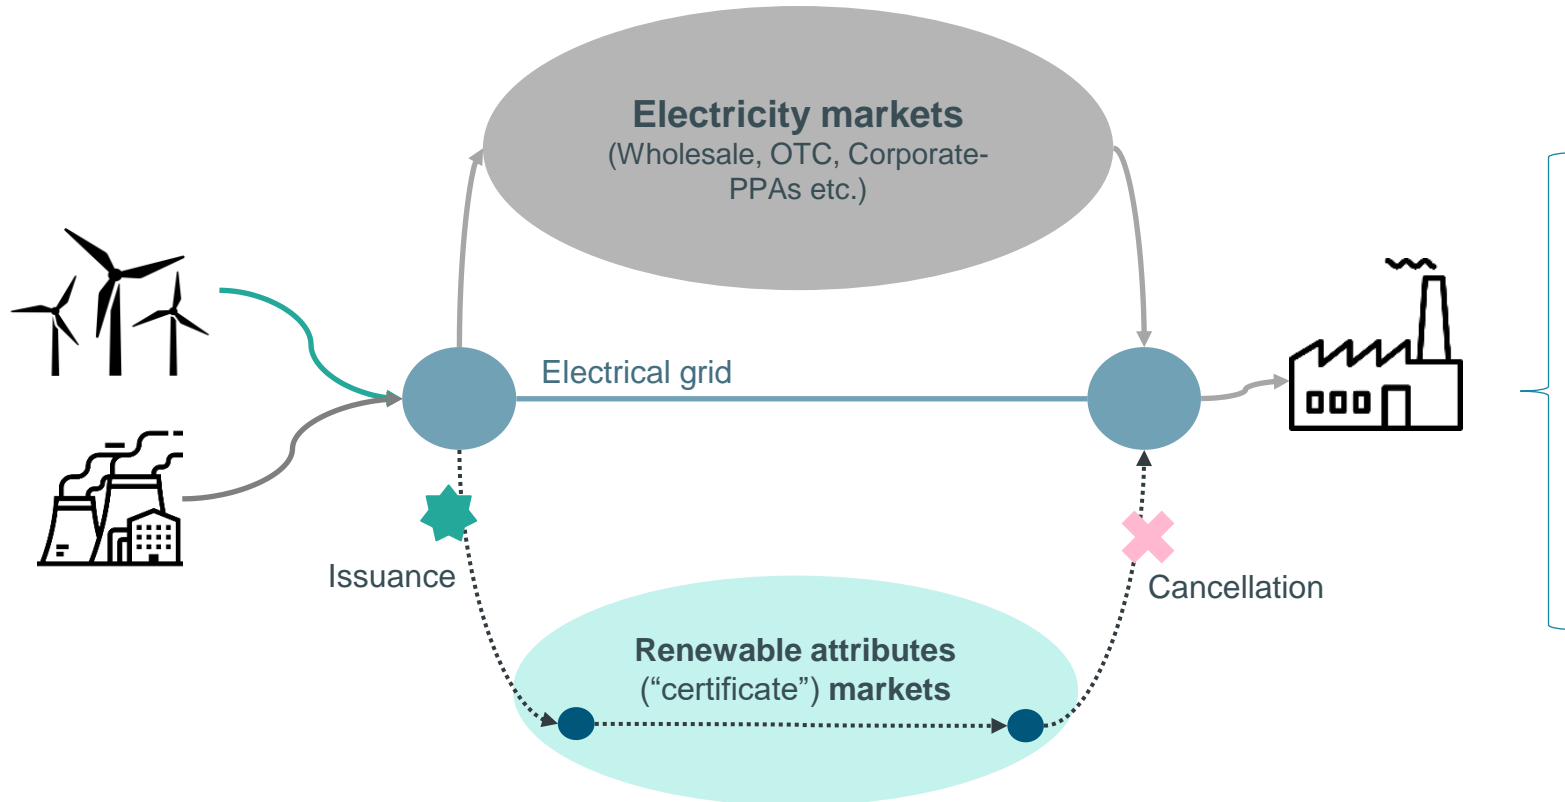

- Prove of Concept May 2021 approved
- Basic system release Q1-2022
- Market and regulatory muscles

What we seek

- Scaling opportunities
- Customers who will engage with data
- International voice

The target picture (2025): Fundamental principles

The book-and-claim approach will be maintained for certification of renewable electricity...

The book-and-claim approach brings the **maximum liquidity** to the commodity „electricity“ (and makes it tradable as such).

...but improved along its value chain.

Full (regulated) Granular Tracking value-chain

Issuance of granular certificates

- **hourly/15min. granularity** (time-stamped).
- Energy volumes in Wh.
- Further generator data (such as source, location, commissioning date).

Location-aware transactions

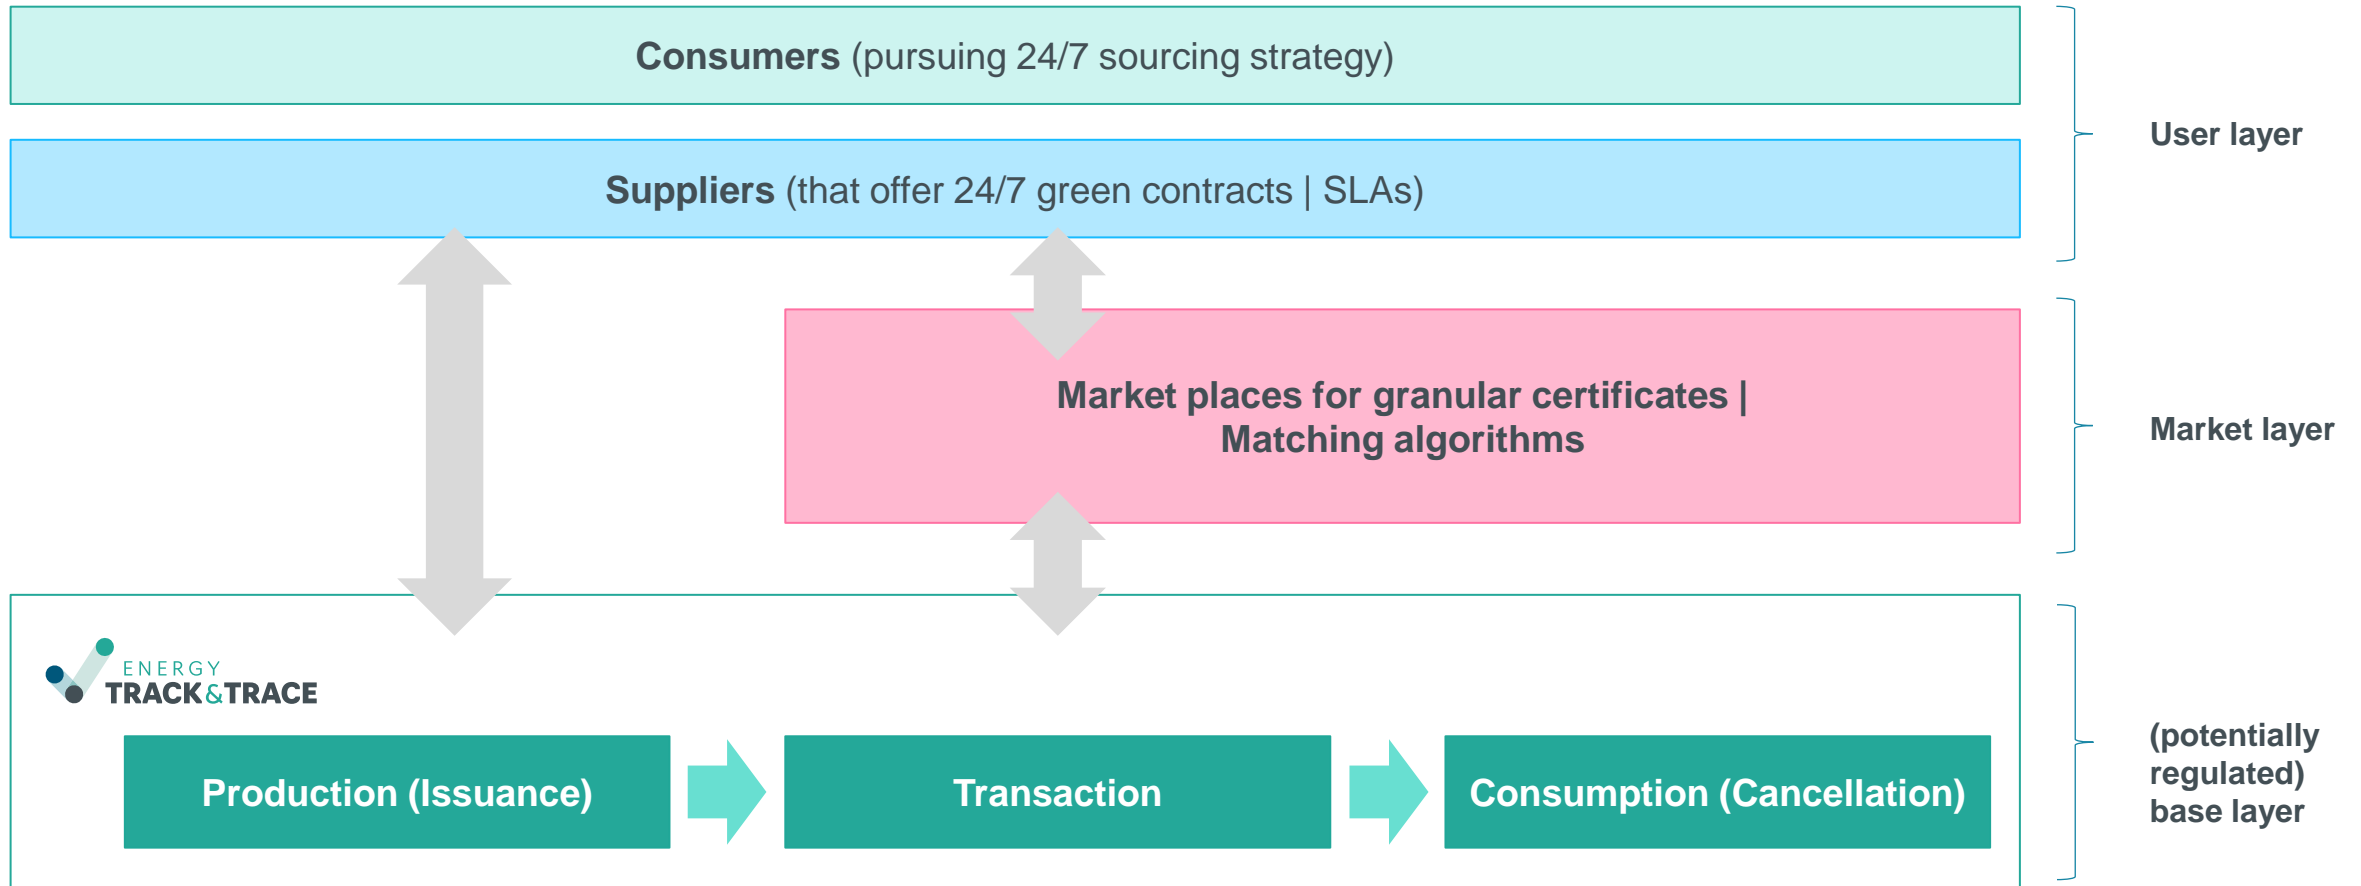

- Takes the **physical cross-border** capacity into account.

Matching with the consumption

- Granular certificates can be cancelled/retired on consumption with **the same time-stamp**.

From a regulated base layer to the end-customers

The target picture (2025):

2 use-cases of the future

Case 1: A large **data-center operator** willing to become 24/7 green via PPAs.

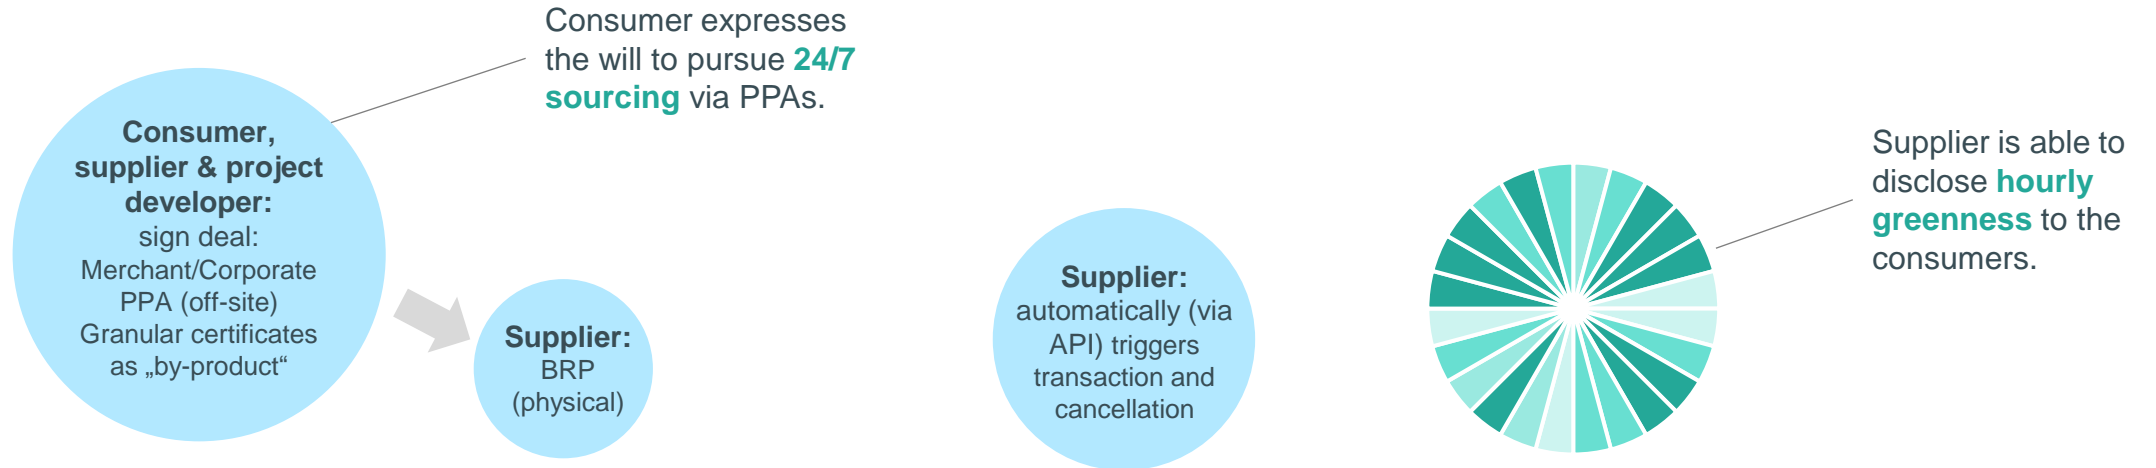

Case 2: A **small producer** of plastic bottles is willing to become 24/7 green.

Case 1 - User journey for large consumers (corporate PPA use-case)

Users layer

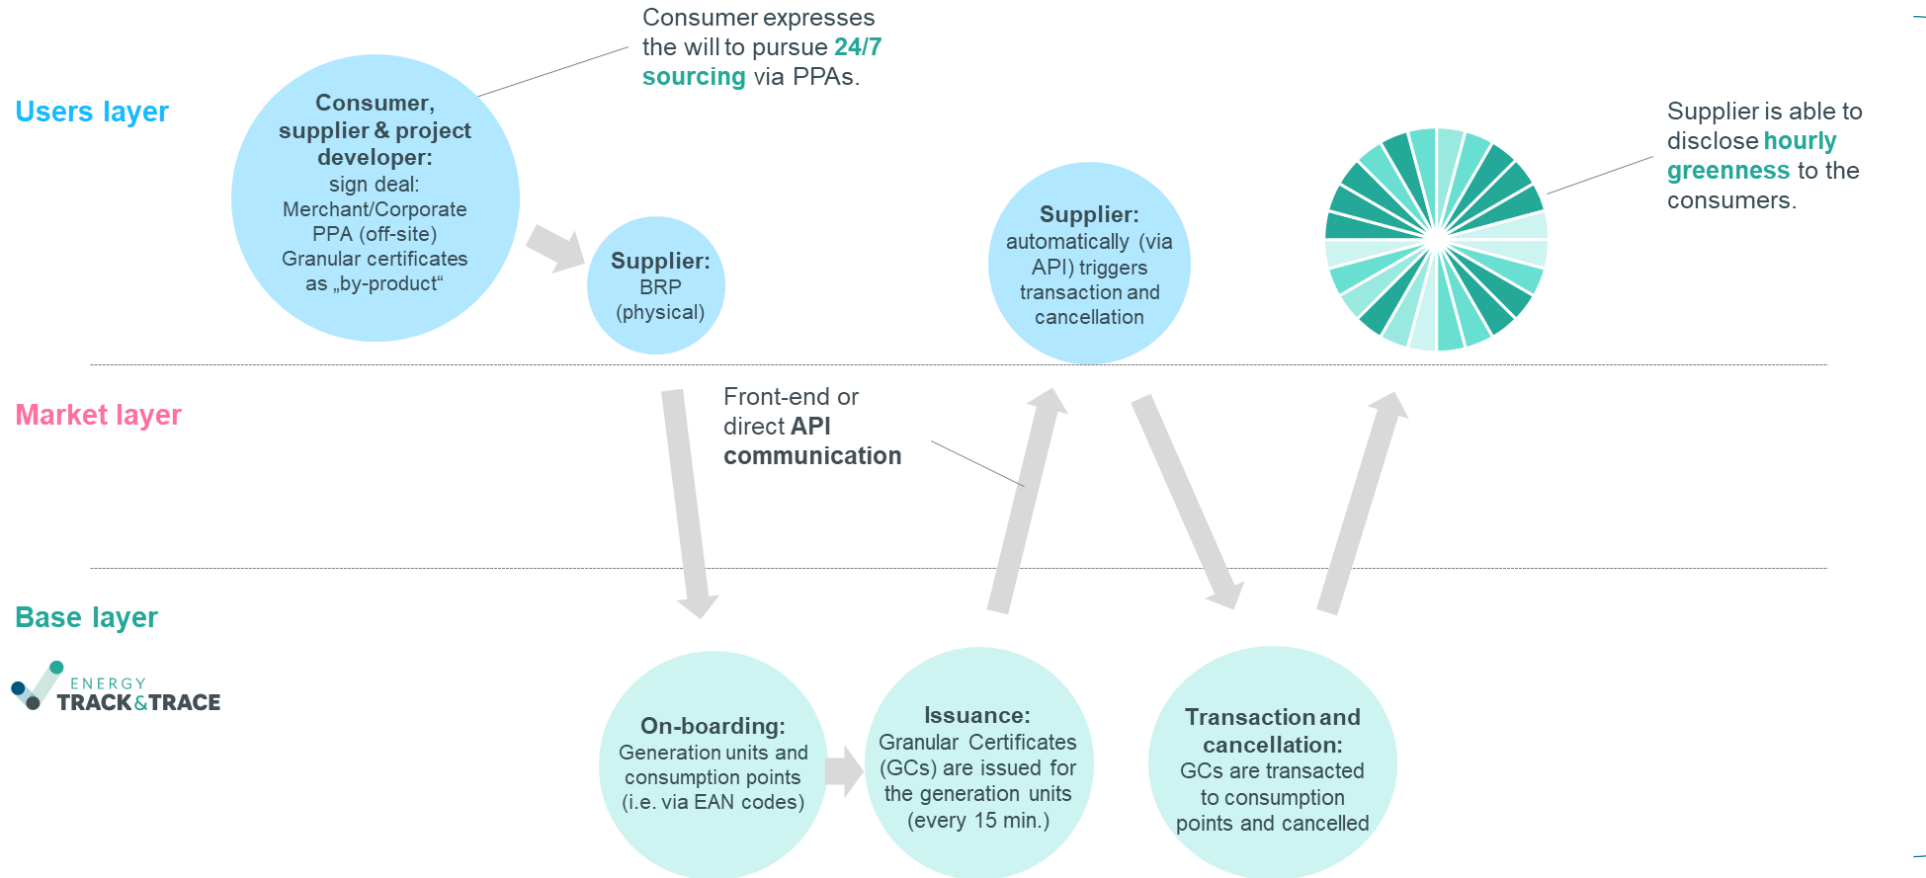

Market layer

Base layer

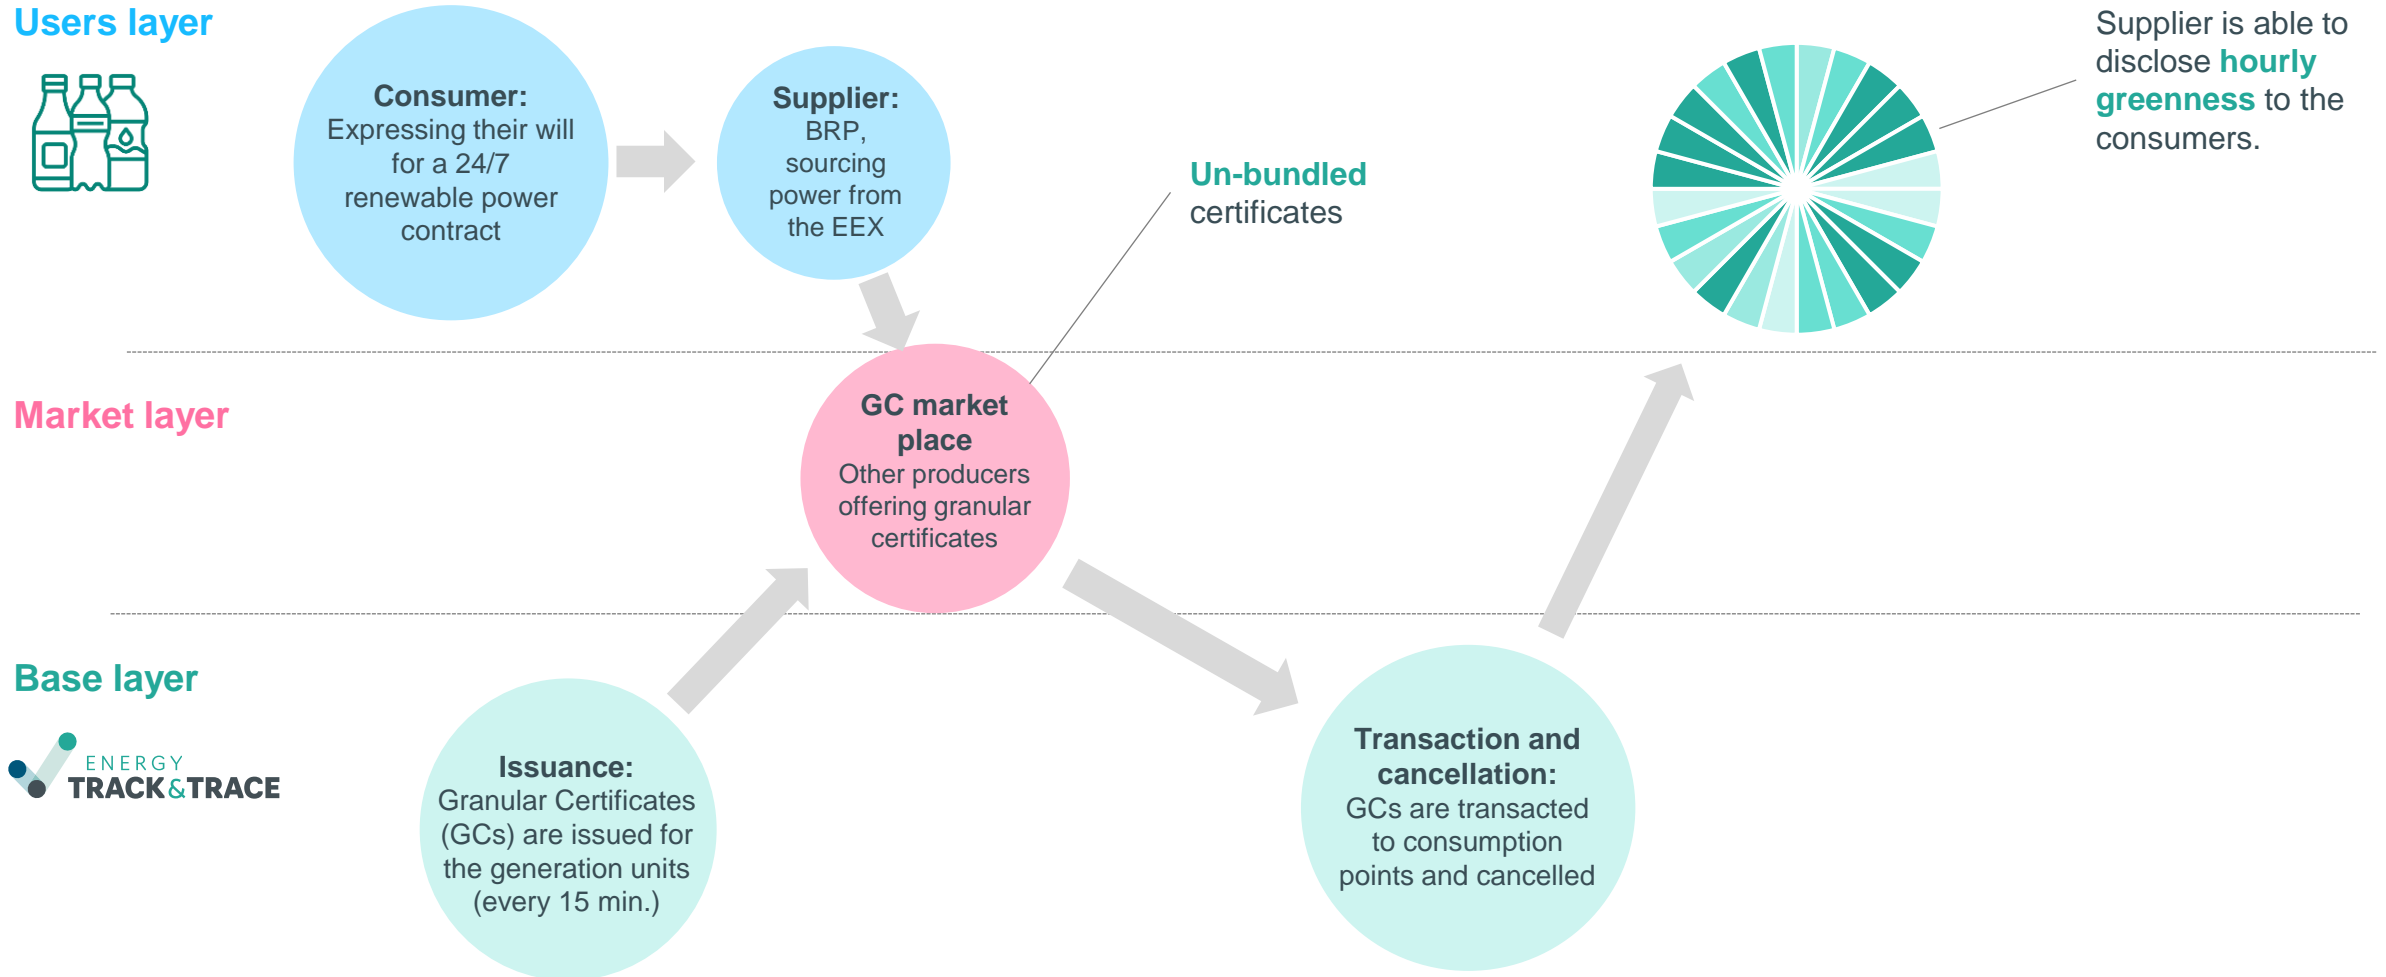

Case 1 - User journey for large consumers (corporate PPA use-case)

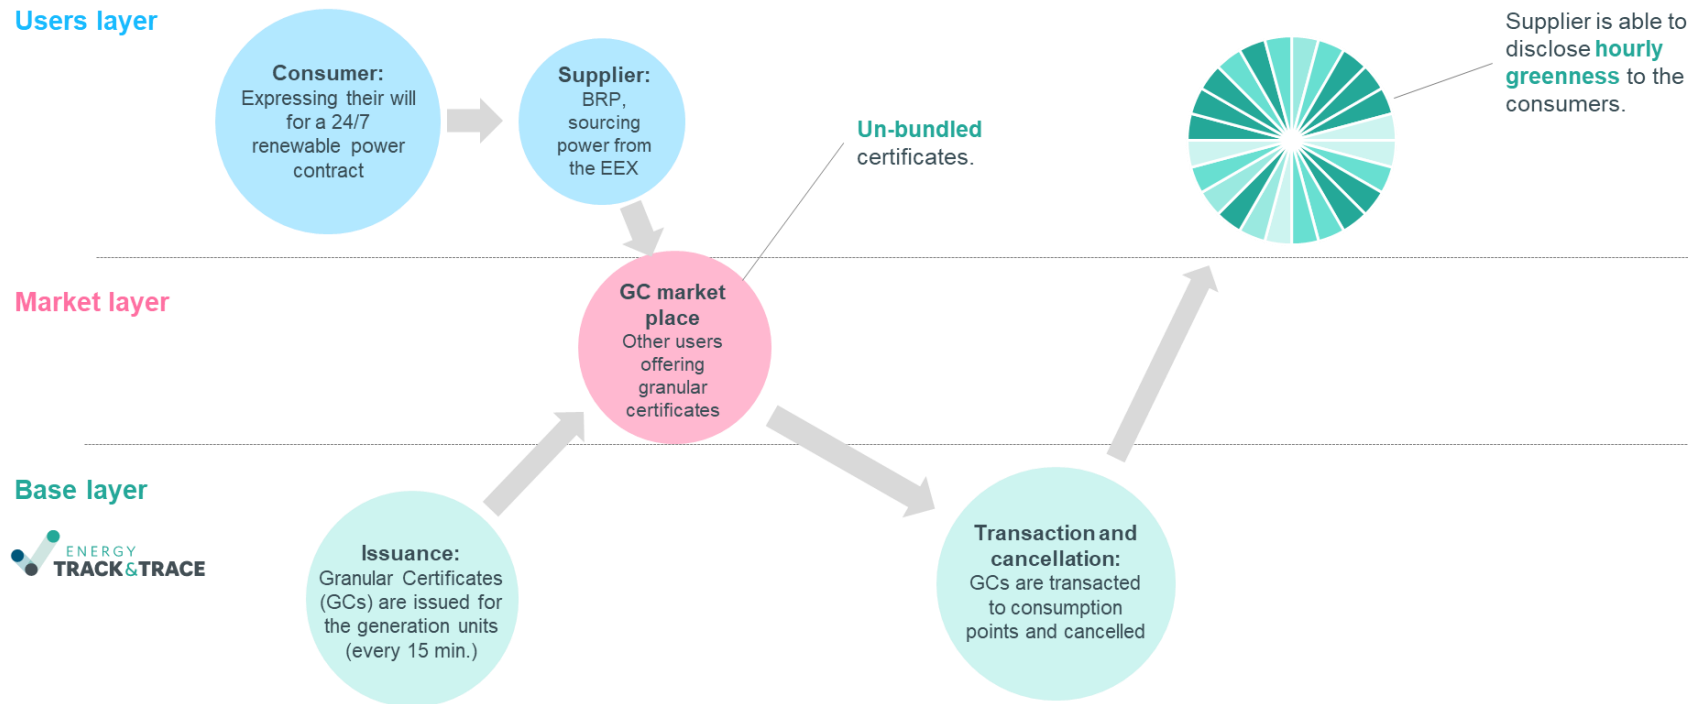

Way to get to 100% green:

- Investment in **further PPAs** | over-production.
- **Demand side** flexibility (in line with process requirements and grid tariff structure).
- Investment in **storage**.

Case 2 - The user journey for smaller consumers (no-PPA use case)

The user journey for smaller consumers (no-PPA use case)

Way to get to 100% green:

- **Active procurement** of granular certificates (and thereby supporting renewable expansion)

Go to www.menti.com and use the code 4255 4036

Comments and voting

The 2 user journeys

Let's engage in Mentimeter for online voting

Case 1

User journey for large
consumers
(corporate PPA use case)

Case 2

User journey for smaller
consumers
(no-PPA use case)

(ex-post) Market design for Granular Certificates

Market layer

Continuous Market Place

Producers (Sellers) of Granular Certificates:

Anytime after the production happened, sellers can place offers on the market.

Consumer/Suppliers:

The can apply filters and continuously buy granular certificates.

Such as:

- **Price**
- **Wh for sale**
- **Further information** (such as energy source, commissioning date, location)

Consumers will know **exactly what they get.**

Regular Auctions

Producers (Sellers) of Granular Certificates:

Anytime after the production happened, sellers can place offers on the market.

Consumer/Suppliers:

Expressing their will to buy (price)

Auction:

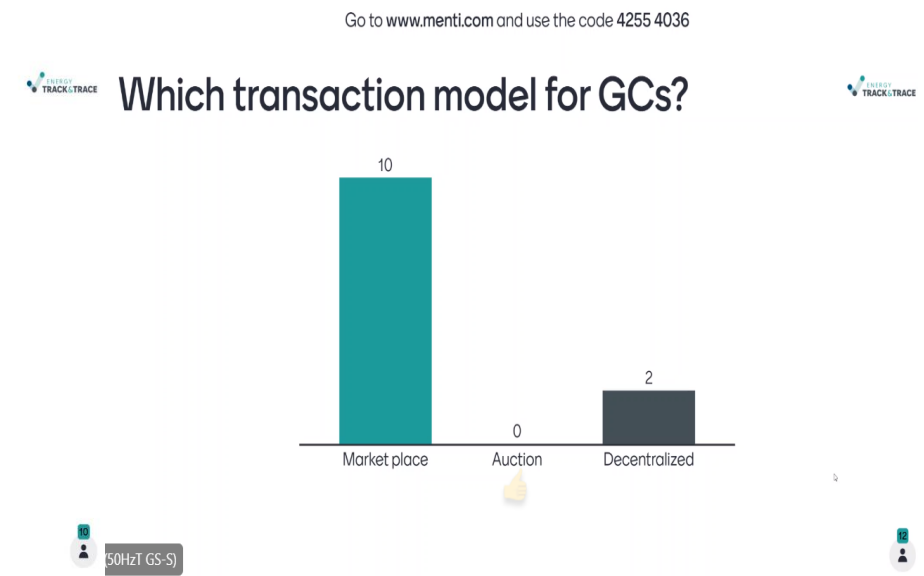

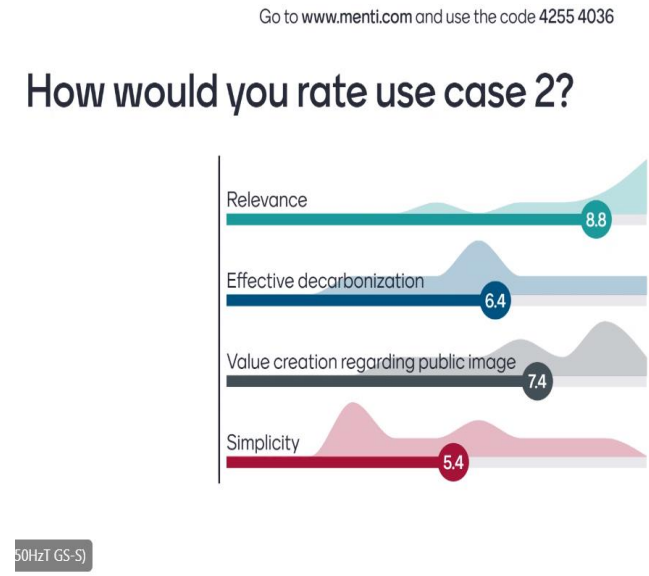

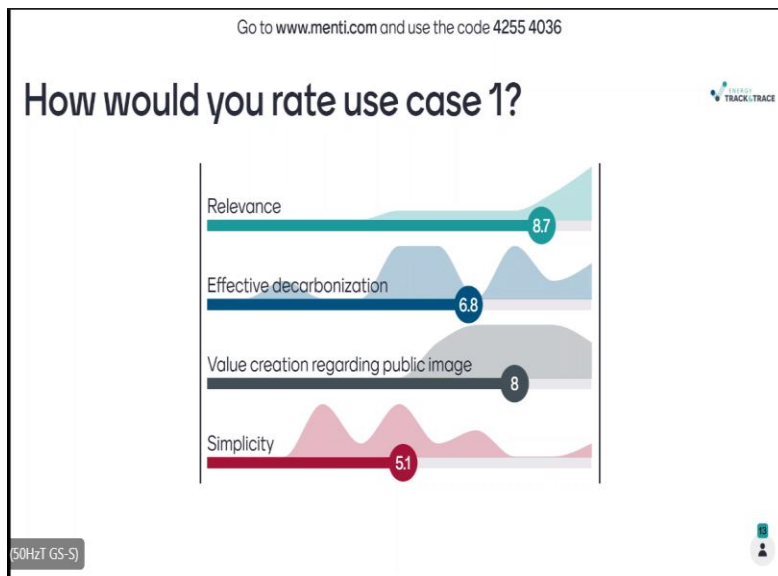

On a regular basis.

Random allocation of granular certificates

Go to www.menti.com and use the code 4255 4036

Comments and voting

The 2 market concepts + no central market – results below:

To make this fly...

Barriers

1. Regulatory
2. GO vs GC (Double counting)
3. How to onboard consuming Granular certificates?
4. Communication

...and initiatives to tackle them

1. REDIII, CEN standard being addressed through signals sent to national administration and European Commission
2. Collaboration & co-creation how to overcome these obstacles with relevant authorities and specialists
3. Workshops – facilitated by e.g. Energy Track and Trace, EnergyTag etc.
4. Web&SoMe, Panel talks, Press releases, www.energytrackandtrace.com

Summing up and next step

1. Collecting your comments and input

2. Workshop "2 will take place January 27 2022

- Focus points for Workshop #2 – Barriers to succeed - how to tackle the them...
- Mobilize for data sharing

“Energy Track and Trace is your
real-time digital proof that
sustainable energy choice actually
makes a difference”

See you 27th of January 2022
